

# ‘Scaling up: Challenges and Opportunities’

1

# The most important field for upscaling

2

- **Clinical Services**

The scope is rural and urban India and in the international arena easier access is possible in South East Asia, Middle East, Eastern Europe, South America and Africa

# The Challenge in clinical services

3

- Creation of an accreditation council for clinics and hospitals
- Distributing free soft ware for standardized documentation of clinical management
- Networking of all accredited clinical facilities in the country
- Creation of a national and regional *clinical evidence*, data processing centers in **non-govt. sector** for analysis of clinical records of all accredited Ayurvedic clinics and hospitals
- Creation of clinical research portal for publishing of clinical evidence reports to create consumer confidence

# The impact of expansion in clinical services

4

Will impact :-

- Manufacturing sector and
- Education

# Other fields for upscaling

5

- Establishing world class common facilities for QC, processing and packaging technologies
- Manufacturing of high priority products using not good but Next Manufacturing Practices (NMP)
- Web based short-term courses on Good Clinical Practice for young medical professionals
- Establishing network of autonomous UG and PG educational institutions for promoting innovation
- New public health initiatives

# Fields for innovation

6

- Preventive health
- IT based health education for rural and urban households
- Green health programs for rural and urban poor

# Thank you for your attention
